RAY Shop

A shop inside WhatsApp for sellers with no website, run by Razorpay's RAY.

Track 2: Recover and Grow with AI
ray-shop.vercel.app

THE BET

Win India's next brands while they are still a home kitchen and an Instagram handle.

Put the smallest sellers on Razorpay on day one, so as they grow into brands, they grow with Razorpay.

₹2.29L	₹80,210	₹1,320	+21%	11 / 11
collected on Razorpay in 3 months	paid after a RAY reminder	fake "paid" screenshot caught	sales growth in September	eval cases passed, two runs

THE PROBLEM

Home bakers, thrift stores and boutiques sell in Instagram DMs and get paid by UPI to a personal account. Free UPI gives them **money and nothing else**, so they **never need Razorpay**, and as they grow they pick whatever is easiest. Meanwhile orders get lost in chats, fake "paid" screenshots slip through and advances go unchased.

WHAT I BUILT

RAY on WhatsApp (launched September 2026) and the **Agentic Dashboard** serve existing merchants. RAY Shop extends them to **sellers who aren't on Razorpay yet**; she approves anything a customer sees. Five jobs: it turns a menu photo into a shop page; turns a Hinglish DM into a priced order and a Razorpay link; checks "paid" screenshots against Razorpay; sends one polite reminder per unpaid advance; and sends offers to regulars as sales unlock the next product. **Two jobs recover money, two grow it, one gets her started.**

WHY RAZORPAY WINS

With a 2% UPI fee, a gateway alone will not win these sellers; a shop that **saves them money** will. RAY Shop meets "millions of SMEs" (Razorpay at GFF'26) on day one and becomes **the top of Razorpay's merchant funnel**:

Payment Links › Payment Pages › Checkout › Capital

WHAT RAY TELLS HER TO GROW

From her own sales, RAY tells Meera to **keep red velvet** (34% of revenue, up 100%) and the Biscoff jar (bought with another item in 52% of orders), and to **feature the chocolate truffle**, down 33%, before dropping it. 37 of 70 customers reorder, each worth **2.8x an occasional buyer**. Her Diwali offer reached **the 27 who opted in** and skipped 10; no orders yet, as it went out on the demo's last day.

AI DESIGN

LLM · Rules in code · Seller · Razorpay

It doesn't just explain: it prices, links, verifies and chases.

The LLM reads the mess; code moves the money; the seller makes the call.

CUSTOMER	LLM	RULES	SELLER	RAZORPAY	RAZORPAY
Sends a DM	**Reads it**	**Prices it: ₹1,180**	**Approves**	**Sends the link**	**Records payment**
"2 box red velvet, Saturday 6 baje, ek eggless"	Items, date, area. Regex breaks on new phrasing	Delivery, advance, oven space. Exact, auditable	One tap. Nothing reaches a customer without her	Amount from the quote, never the model (mocked in demo)	The only proof. Screenshots never count

An agent, not a chatbot
15 tools; 4 wait for her tap. Built for RAY, the Agentic Dashboard and Agent Studio.

Guarded
Every rupee in a message is checked; "approve discounts na?" is refused.

Evaluated
11/11 in two runs on synthetic data, incl. 4 adversarial orders and a fake screenshot.

Cheap
$0.03 to $0.10 of model cost per order, against a ₹23.60 fee on a ₹1,180 order.

DECISIONS AND TRADE-OFFS

- **The model reads, code decides money.** Slower to build, but it can never invent a price.
- **The seller approves every customer message.** More taps for her, but nothing goes out in her name without her.
- **Tiny sellers first.** Less revenue per seller today, for a merchant who stays as she grows.
- **Only Razorpay payments are verified.** Orders paid to her personal UPI show as unverified, never as fake.

HOW WE MEASURE IT

NORTH STAR	Sellers on a paid Razorpay product in 12 months
RECOVER	Rupees recovered per seller per month
ADOPT	Share of orders paid by link, not screenshot

WHAT I WOULD TEST NEXT

A two-week shadow run with 3 to 5 real sellers: RAY drafts quotes and screenshot checks from their chats but sends nothing, and I compare each call with what the seller did. Then an **8-week pilot with 100 sellers**, stopped early if under a third of orders move to links by week 4.
